

Turf Type Tall Fescue

TRAVERSE^{SRP}

SELF-REPAIR POTENTIAL TALL FESCUE

- **TRAVERSE SRP™** is a new and advanced variety of tall fescue from TMI which produces rhizomes for self-repair of wear and divot damage, and helps in the establishment of sod and general turf applications

- **TRAVERSE SRP™** has improved Brown Patch resistance, and is especially helpful where heat and humidity pressure take its toll on older tall fescues

- **TRAVERSE SRP™** is compact, dense, has a dark green color and is fine-leaved so it mixes well with Kentucky bluegrass in prime turfgrass applications

- **TRAVERSE SRP™** has an expanded adaptation range compared to older varieties

Spreading rhizomes strengthen sod, help establish new turf, and repair damaged areas

Perfecting Turfgrass Performance™
