

TITANIUM 2^{LS}

TALL FESCUE

TITANIUM 2 LS TALL FESCUE

SETTING THE BAR FOR TALL FESCUES

- AGGRESSIVE LATERAL SPREAD
- VERY DARK GREEN
- EXCELLENT SOD STRENGTH
- SHADE TOLERANT
- ENDURES LOWER FERTILITY SOIL
- SUPERIOR TURF DENSITY

Titanium 2LS is setting the bar high for the next generation of tall fescue cultivars. **Titanium 2LS** exemplifies the perfect high-quality turfgrass; it's dark green, very dense and has excellent wear tolerance. **Titanium 2LS** is an excellent choice for sod farms and other applications where only the best variety will do. In addition **Titanium 2LS** is very drought tolerant, keeping its great looking appearance late into the summer even under less-than-ideal conditions. **Titanium 2LS** is also able to grow successfully in soil that has low fertility. And with all MVS varieties that carry the *Lateral Spread* brand, **Titanium 2LS** has aggressive lateral spread ability.

NTEP DATA

VARIETY	TURF QUALITY MEAN	LEAF TEXTURE MEAN	SPRING DENSITY MEAN	GENETIC COLOR MEAN	TQ UNDER SHADE MEAN (IL)
TITANIUM 2LS	6.5	6.4	6.5	6.8	6.9
RHAMBLER 2 SRP	6.4	6.2	6.3	6.4	6.6
HOT ROD	6.3	6.1	6.1	6.5	6.2
GRANDE 3	6.2	6.0	6.3	6.3	6.6
FAITH	6.2	6.0	6.1	6.6	5.5

2012 NTEP TALL FESCUE DATA - 2013 PROGRESS REPORT DATA. TURFGRASS QUALITY AND OTHER RATINGS 1-9; 9=BEST

GROUND COVER - SUMMER

Titanium 2 LS has excellent drought tolerance which means more living ground cover all summer long.

2013 NTEP Mean Percent Living Ground Cover (Summer)

BROWN PATCH RESISTANCE

Titanium 2LS has excellent disease resistance including a high NTEP ranking against Brown Patch.

2013 NTEP Mean Brown Patch Ratings

FALL COLOR - OCTOBER

Titanium 2LS maintains its dark green color into the fall months and beyond.

2013 NTEP Mean Fall Color (October)

SEEDING AND OVERSEEDING Tall fescue prefers warmer soil for germination, typically 55°F to 58°F. In the Transition zone this means early spring and early fall. Further north, late spring and late summer is preferred. Titanium 2LS should be sown at a rate of 6 to 9 lbs per 1000 sq ft (275 to 400 lbs per acre), lightly covered with soil and kept moist until after the first cutting. Maximum density is achieved by planting with a slicer/seeder or following aeration, and with the application of a starter fertilizer. First mowings are generally within three weeks, or when plants first reach 3 in. in height. Overseed existing tall fescue at a rate of 225 to 300 lbs per acre.

MAINTENANCE Titanium 2LS natural dark color, density and pest resistance minimize the need for extensive maintenance. Generally 2 to 3 pounds of nitrogen as part of a balanced fertilizer applied annually is all that's required. Cutting heights should range between 2 to 3 inches. Under controlled conditions heights down to 1 inch can be satisfactorily maintained.
