

GRIDIRONTM

TURF MIXTURE

Superior Wear Tolerance, Recuperative Potential

- ✓ Excellent heat and drought tolerance from a deep root system
- ✓ Improved sod-forming capability and excellent turf density
- ✓ Adapts well to a low maintenance program
- ✓ Good resistance to common turf diseases

Jacklin's **Grid Iron** Mixture provides all of the outstanding characteristics of our Triple-A tall fescue blend. It also brings additional players to the field with improved sod-forming characteristics and recuperative potential of Jacklin Kentucky bluegrass and the benefits of quick establishment with Jacklin perennial ryegrass.

Formulation:

80% Two Jacklin tall fescues:

The tall fescue has a deep root system that provides excellent heat and drought tolerance.

10% Jacklin Kentucky bluegrass:

The Kentucky bluegrass varieties are selected for **Grid Iron** to help maintain a denser and finer textured turf by using rhizomes to creep into voids caused by divots or excessive wear.

10% Jacklin perennial ryegrass:

The perennial ryegrass provides quick establishment and soil stabilization giving the tall fescue and Kentucky bluegrass time to fully establish.

Grid Iron Mixture is well adapted to low maintenance programs and will handle full sun or partial shade. This agronomic combination provides excellent turf density and a desirable playing surface.

Seeding Rate:

New Seeding 275 - 300 lb/acre (310-340 kg/hectare)
