

# Woven Needle Punched Landscape Fabric

**Control** unsightly weeds for low maintenance landscaping and gardening.

**Allow** air, water, and fertilizer through fabric to promote healthy plant growth.

**Conserve** soil moisture... dramatically reducing watering.

**Balance** soil temperature - creating hardy, deep rooted plants.

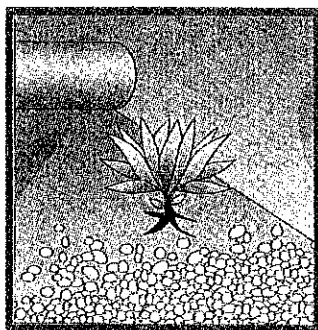

**Promote** critical gas exchange between soil and air to prevent "sour" or "dead" soil.

**Stabilize** soil under paving stones preventing uneven settling and shifting.

**Prevent** soil loss and erosion when used behind retaining walls and when installing trench drains.

Woven Needle Punched Landscape Fabrics allow water and air to pass through to the plant roots, creating a healthy growth environment. Plastic film and laminated fabrics do not allow water and air to pass through freely, creating poor soil conditions.

500 Series, 5 oz. Woven
