

Damp Shade Lawn Seed Mixture

Seed mix contains:

- 40% Creeping Red Fescue (2 Improved Varieties)
- 20% Chewings Fescue (Improved Variety)
- 15% Perennial Ryegrass (Improved Variety)
- 15% Poa Trivialis
- 10% Kentucky Bluegrass

As the name implies, "Damp Shade", this mix should be considered where the soil is usually damp. Poa trivialis has a very high seed count! It will sprout quickly and do as well as anything else in moist conditions. Lawns that grow in the shade do not tolerate traffic or high fertility.

Seed Mix Features:

- Light to moderate shade conditions.
- Only where soil is usually damp.
- Low traffic areas.

Recommended Seeding Rates:

- New seeding rate: 5-6 lbs. per 1,000 square feet.
- Overseeding rate: 2.5-3 lbs. per 1,000 square feet.
