

## STELLAR 4GL

- #1 UNDER TRAFFIC STRESS
- GREAT TRANSITION ZONE QUALITY
- IN SEEDLING VIGOR

  NTEP DISEASE TRIAL
- LEADER

## 4th GENERATION STELLAR PERFORMANCE

**Stellar 4GL** continues the outstanding line of Stellar ryegrass cultivars with this 4<sup>th</sup> generation *Gray Leaf Spot (GL)* resistant entry! It excels in NTEP traffic stress trials at multiple locations. It also beats Crown Rust and Pink Snow Mold handily. Combining elite turf quality, and some of the fastest Divot Recovery around, make **Stellar 4GL** the stellar choice in perennial ryegrass!

PINK SNOW MOLD				
STELLAR 4GL (HIGH)	7.7	0		
LOW LSD	1.3 2.6			

Stellar 4GL scored at the top of the Pink Snow Mold trial, showing exceptional resistance to this disease.

2017 NTEP Snow Mold Rating -Logan, UT.

DIVOT RECOVERY				
HIGH STELLAR 4GL	93.7 <b>93.0</b>	0		
LOW LSD	61.5 6.6			

Stellar 4GL recovers well from wear, scoring at the top of the NTEP divot recovery trial.

2017 NTEP Mean Divot Recovery -Lexington, KY.

**SEEDING AND OVERSEEDING** Stellar 4GL readily establishes on loosened bare soil or after verticutting existing turf for renovation and overseeding. For typical new seeding applications, apply at a rate of 5-7 lbs. per 1000 sq. ft. Periodic reseeding at 3-5 lbs. per 1000 sq. ft. maintains density for visual appearance and durability. For overseeding dormant warm season grasses, a rate of 30-40 lbs. per 1000 sq. ft. is suggested for golf course greens. (A rate of 7-10 lbs. per 1000 sq. ft. (300-450 lbs. per acre) for tees, fairways and roughs.)

**MAINTENANCE** Stellar 4GL will form a tight knit turf under a broad range of soil types and environmental conditions; from full sun to medium shade. It will mow cleanly at heights of 1/2" and above. Due to its tillering ability and compact profile, Stellar 4GL can be maintained at fairway cutting heights when appropriate management practices are observed.
