

# TITANIUM G-LS

TALL FESCUE

## TITANIUM G-LS TALL FESCUE

- STELLAR PERFORMANCE IN MULTIPLE REGIONS
- EXCELLENT SPRING AND FALL DENSITY
- LOW MOW ABILITY
- OVERALL TOP NTEP QUALITY SCORE
- GRAY LEAF SPOT RESISTANCE
- LATERAL SPREAD™ TECHNOLOGY

## TITANIUM G-LS STANDS UP TO ALL THE ELEMENTS!

**Titanium G-LS** (PPG-TF 255) has the top 2020 NTEP score on overall turf quality ratings, scoring in the top 25% more than 68% of the time. **Titanium G-LS** is known for its *Gray Leaf Spot (G)* resistance and best in class spring & fall density. This tall fescue excels across multiple regions, making **Titanium G-LS** versatile without sacrificing performance. *Lateral Spread™ (LS)*, low-mow ability and very dark green color make this variety a clear standout!

### AREAS OF USE

- PROFESSIONAL LAWN AND LANDSCAPE
- HOME LAWNS
- MUNICIPAL USE
- SPORTS FIELDS

### TURF QUALITY - TRANSITION

Titanium G-LS scored #1 in turf quality for the Transition region.

2020 NTEP Mean Turfgrass Quality Rating - Transition Region

### TURF QUALITY - LOW-MOW

Titanium G-LS scored high in overall turf quality under low-mow conditions (1.5").

2020 NTEP Mean Turfgrass Quality Rating, 1.5" Mow - Blacksburg, VA.

**SEEDING AND OVERSEEDING** Tall fescue prefers warmer soil for germination, typically 55°F to 58°F. In the Transition zone this means early spring and early fall. Further north, late spring and late summer is preferred. Titanium G-LS should be sown at a rate of 6 to 9 lbs per 1000 sq ft (275 to 400 lbs per acre), lightly covered with soil, and kept moist until after the first cutting. Maximum density is achieved by planting with a slicer/seeder or following aeration, and with the application of a starter fertilizer. First mowing's are generally within three weeks, or when plants first reach 3 inches in height. Overseed existing tall fescue at a rate of 225 to 300 lbs per acre.

**MAINTENANCE** Titanium G-LS natural dark color, density, and pest resistance minimize the need for extensive maintenance. Generally 2 to 3 pounds of nitrogen as part of a balanced fertilizer applied annually is all that's required. Cutting heights should range between 2 to 3 inches. Under controlled conditions heights down to 1 inch can be satisfactorily maintained.
